

Instructions: Choose the best answer for each question.

1. What is the primary purpose of story flows in software development?
 - A. To describe how users interact with software to accomplish specific tasks
 - B. To replace all other documentation
 - C. To write the actual source code
 - D. To create marketing materials
2. Story flows should be written from whose perspective?
 - A. The database administrator's perspective
 - B. The user's perspective
 - C. The project manager's perspective
 - D. The system's perspective
3. What is the typical format for a user story statement?
 - A. "I need [feature] because [reason]"
 - B. "The system will [action] to provide [benefit]"
 - C. "As an application user, I want to [action] so that [benefit/goal]"
 - D. "Users require [action] for [purpose]"
4. What is a "trigger" in the context of story flows?
 - A. A bug in the system
 - B. An error message
 - C. A database query
 - D. The specific action or event that initiates the flow
5. Which of the following is an example of a trigger?
 - A. An HTTP GET request
 - B. A completed transaction
 - C. A validated form
 - D. A stored database record
6. What are "guards" in story flows?
 - A. Security personnel
 - B. Conditions that must be met for the flow to continue normally
 - C. Error messages shown to users
 - D. Final steps in a flow
7. When a guard condition fails, what should be defined?
 - A. System shutdown procedures
 - B. Database rollback only
 - C. Exception flows that define alternative paths
 - D. A new user story

8. How should alternative flows be indicated in story flows?
 - A. Using all capital letters
 - B. Using parentheses
 - C. Using bold text
 - D. Using the "Alt:" prefix
9. In a typical CREATE operation, what happens after data validation fails?
 - A. The application saves invalid data anyway
 - B. The application redisplay the form with error messages
 - C. The application crashes
 - D. The application deletes all previous data
10. What is the typical first step in a READ operation?
 - A. POST request with data
 - B. DELETE request
 - C. GET request with identifier
 - D. PUT request to update
11. In the book deletion example, what happens at step 3 where "Alt:" appears?
 - A. The database is backed up
 - B. The system automatically deletes the book
 - C. An error is thrown
 - D. The user makes a decision to delete (yes/no)
12. What should happen when writing "Exit flow" in an exception flow?
 - A. The flow doesn't continue to subsequent steps
 - B. The application shuts down completely
 - C. The user is logged out
 - D. All data is deleted
13. Which HTTP method is typically used when submitting new data in a CREATE operation?
 - A. GET
 - B. POST
 - C. FETCH
 - D. DELETE
14. According to the lecture, story flows should be treated as:
 - A. Optional documentation for small projects
 - B. Confidential documents only for managers
 - C. Living documentation that evolves with the application
 - D. One-time documentation that never changes
